

Best Web Hosting for SOHO

Web hosting for small businesses and personal web sites guide

How to find best hosting for your web site?

You have decided to build a web site for your business: restaurant, shop, dental office, affiliate site, or just for fun. You are looking for hosting service (a space on some Internet server where your Web site will be placed and can be accessed by others through the Internet).

What main Hosting Features should you understand?

1. Platform

Windows or [Linux](#)?

You only need Windows-based hosting if you plan to use Microsoft-specific applications, such as ASP, ASP.Net, Coldfusion, MSSQL Server, or MS Access databases.

If you do not need any of these Microsoft-specific applications - or if you don't even know what they are, then the better choice will be to host your website on a Linux platform.

In fact, the majority of all websites on the Internet are hosted on the Linux platform.

2. Domain Name

Domain Name is your site name (www.DomainName.com=www.yoursitename.com). Domain names are human-friendly identifiers that point to the IP addresses of resources on the internet. Web sites represent one such resource. Domain names have to be unique, and must be registered through a registrar in order to be used.

The best way to register a Domain Name is with your Hosting company. A lot of Hosting companies offer you a free Domain Name registration with a hosting plan. In case you will cancel your hosting account, the Domain Name becomes paid but is not lost. If the Domain Name is not free, it can cost ~\$10-\$20 per year.

3. Dedicated IP

IP addresses are unique identifiers that allow your website to be found on the internet. Dedicated IP address means that each domain (web site) has its own IP. An alternative is a Shared [IP](#) where multiple domains are assigned to a single IP. A Dedicated IP is necessary to use for [SSL \(Secure Socket Layer\)](#) certificates, as well as a variety of other functions. SSL is used to transfer sensitive information such as credit card numbers. For example, e-commerce found on online stores use SSL . If Dedicated IP is not a free, it can cost you extra \$20 per year.

4. Data Transfer (bandwidth)

The amount of data, per month, that you can move to (upload) and from (download) the host server. When web site visitors view web pages, pages are downloading from the server. 1 GB of data transfer ~40,000 page views.

5. Database Support

Needed for e-commerce, forums, blogs, or your own data.

6. Other

A lot of features are available on different web hosting services. So, if you are looking for something specific, just be sure that the particular hosting supports it.

| Name | Plan | Price (2yr) | FREE Site Builder | Host Multiple Domains | Disk Storage | Domain Name | Dedicated IP | Data Transfer | Sub Domains | Database Support | FREE 24/7 Support | E commerce |

[Back to Glossary](#)

What is Blog

Blog : A Blog is a website where entries are written in chronological order and commonly displayed in reverse chronological order. Many blogs provide commentary or news on a particular subject such as food, politics, or local news; others function as more personal online diaries. A typical blog combines text, images, and links to other blogs, web pages, and other media related to its topic.

[Back to Glossary](#)

What is **Catch-All Email Addresses**

Catch-All Email Addresses : Many times, a person may want one single email account to receive all email that comes into a domain, or any emails that are not addressed to an existing account. This is useful in making sure that ANY email that comes into a domain is received, even if the address is misspelled. So long as the domain is correct, a catchall account will receive any of these emails.

What is **Server Side Includes (SSI)**

Server Side Includes (SSI) : Server Side Includes are files which can be included when a web page is parsed. For instance, if you have a header or footer which appear on every page in your site, you can separate their code into separate files, SSI files, and the content of these can be included into the various pages within your site when they are accessed. This function is a convenient way to modularize repetitive code, making it easier to build and maintain a site.
